Computer Science graduate specializing in Game Development at Acadia University with hands-on experience in **Unity, C#, C++, Python, and Java**. Passionate about software and game development, with strong problem-solving skills and a solid foundation in programming. Experienced in customer service and administrative roles, demonstrating adaptability, teamwork, and communication. Seeking a **full-time position** to apply technical skills in a professional setting.

Skills

Technical Skills

- **Programming Languages:** Python, Java, C++, C#, JavaScript, HTML, CSS
- **Web Development:** Vue, Angular, React
- **Game Development:** Unity, C#
- **Software Development:** Object-Oriented Programming (OOP), Algorithms, Data Structures
- **Tools & Technologies:** GitHub, Debugging, Mono, .NET Standard 2.1
- **Scripting Backends:** Unity (Mono, .NET Standard 2.1)

Soft Skills

- Strong problem-solving and analytical thinking
- Effective communication and teamwork
- Time management and adaptability

Work Experience

Immigration, Refugees and Citizenship Canada (IRCC)
Program Assistant | *June 2026 – Present*

- Review and completeness-check Canadian citizenship applications to ensure all required information and documentation have been accurately provided.
- Identify missing, incomplete, or incorrect information and return applications to applicants for correction.
- Perform accurate data entry and processing of application information while maintaining confidentiality and attention to detail.
- Digitize and organize application records in accordance with established procedures and data management standards.

Immigration, Refugees and Citizenship Canada (IRCC)
Summer Student | *April – August 2023 & 2024*

- Processed high-volume administrative tasks, ensuring accuracy and efficiency in document handling.
- Assisted in data entry and records management, improving workflow organization.
- Developed strong attention to detail and organizational skills while handling confidential information.

Dairy Queen
Crew Member | *2020 – 2022*

- Provided fast and efficient customer service, ensuring high customer satisfaction.
- Managed transactions, order processing, and food preparation while maintaining hygiene and quality standards.
- Developed teamwork and multitasking abilities, efficiently handling rush-hour operations.

Education

Acadia University | Wolfville, Nova Scotia
Bachelor of Applied Computer Science – Game Development *(Graduated: 2026)*

- **Dean's List (2021–2026)**
- **4.0 GPA**
- **Relevant Coursework:** Object-Oriented Programming, Game Design & Development, Data Structures & Algorithms, Computer Graphics

---

Projects

- **AI Fall Detection System**
  - Developed a machine learning model in **Python** using **Google Colab** to classify audio recordings as either the fall of an elderly individual or a non-fall loud noise.
  - Processed and analyzed audio data to train and evaluate the classification model.
  - Designed the system as a proof of concept for integration with smart home devices (e.g., Alexa) to continuously monitor for potential fall events.
  - Applied Python libraries for data preprocessing, model training, and performance evaluation while improving classification accuracy through iterative testing.
- **2D Strategy Game**
  - Designed and developed a **2D strategy game in Unity using C#**.
  - Utilized **Mono and .NET Standard 2.1** for scripting backend.
- **3D First-Person Shooter (FPS)**
  - Designed and developed a **3D FPS game in Unity using C#**.
  - Implemented mechanics such as player movement, shooting, and enemy AI behavior.
  - Worked on creating environments and integrating 3D assets into the game world.
- **3D Narrative Escape Room Game**
  - Designed and developed a **3D narrative escape room game in Unity using C#**.
  - Implemented mechanics such as player movement, raycast-based interaction, puzzles, and story-driven dialogue systems.
  - Built immersive environments and structured progression across multiple rooms and endings.
  - Integrated UI systems, audio, and game state management to support exploration and narrative flow.
- **Financial Accounting Calculator**
  - Built an interactive financial calculator using **HTML, CSS, and JavaScript** for automated expense tracking.
- **Music Suggestion Database**
  - Designed and developed a full-stack web application that recommends music based on user-selected moods and genres.
  - Built with Python and Flask, integrating the Spotify API via Spotipy for secure authentication and real-time music data.
  - Implemented session-based navigation, randomized song suggestions, album artwork display, and audio preview playback.

- Conducted user testing and incorporated feedback to improve usability, personalization, and feature design.
